ISIS and heritage destruction: a sentiment analysis
Emma Cunliffe¹ and Luigi Curini²

OSM 1. Original Arabic text of Tweets used in text

“The lions of the Islamic State are blowing up the temple (Temple of Baalshamin) in the city of Palmyra, and eventually by God’s will they will blow up the pyramids and the Sphinx.”

“Daesh organization have targeted Shia’s mosques and have also targeted Sunni’s mosques in Abha. So their goal and target is not Sunni or Shia, but rather to destabilize and dismantle the unity of this country.”

“Daesh are the enemy of mosques, even if they blew up in thousands in every mosque, we swear to God that we will never stop worshipping, they are mistaken if they think that we afraid of death.”

### Site type definitions

<table>
<thead>
<tr>
<th>Site type</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Archaeological / historic sites</td>
<td>Ancient sites with no modern religious connotations, including Palmyra, Nimrud, Ninevah, Bab Harran, and Qalat al-Rahbah.</td>
</tr>
<tr>
<td>Graves/Cemeteries</td>
<td>Cemeteries and other grouped outdoor locations of internment.</td>
</tr>
<tr>
<td>Shrines/Temperles</td>
<td>A single burial in a larger tomb, perhaps with dedicated buildings around it.</td>
</tr>
<tr>
<td>Mosques</td>
<td>Mosques, jamis, and mosques that contain shrines. The distinction between a mosque and a shrine here is often largely based on name.</td>
</tr>
<tr>
<td>Churches</td>
<td>Christian religious buildings, including monasteries.</td>
</tr>
<tr>
<td>Other</td>
<td>Sculpture (x1), museum (x1), madrasa (x1).</td>
</tr>
</tbody>
</table>

Categorisations are largely derived from the site name or description used in tweets. We do, however, acknowledge that many overlap, but feel the distinction still aids analysis.
OSM 4.

**Rationale for event inclusion**

The availability of Twitter data determined the date range of the overall dataset, however, the period also witnessed some of the worst ISIS heritage destruction, creating a significant temporal period for analysis.

Twitter database:

In the Twitter dataset, two native Arabic speakers conducted our training set coding. Intercoder reliability was 0.80 according to Cohen’s Kappa. Compared to hand-coded documents in the training set, the root mean square error of the estimates is 1.9%, confirming the accuracy of the results.

*Heritage events database:*

In this dataset, event date, and date of first major propaganda release were recorded (although the media may follow stories for some time). Data collection was conducted in English: an Arabic speaker checked identified events to confirm when they became public.

The following events were included:

- deliberate attacks on heritage (i.e. ancient and religious) sites;
- suicide attacks (if they occurred in a heritage building);
- the use of heritage destruction as criminal punishment;
- the re-purposing of religious sites (for example, for munitions storage, police headquarters and a gymnasium);
- rumoured attacks were included, as a rumour can affect sentiment at the time of circulation, even if the rumour is later demonstrated to be false;
- although *Dabiq* is published in English, its impact meant it was included.

Many events included in the sample focus on people rather than buildings—for example, suicide bombers targeted communities and their religious buildings together at Friday prayers. Although this may seem a reason to exclude such attacks from the analysis, Bevan (2016) demonstrated numerous examples of the links between attacks on communities and their architecture, as well as the indivisibility of the two.
Damage resulting from conflict was excluded, as were car bombs outside mosques, as they targeted people, not buildings. The authors acknowledge that several suicide attacks at mosques were targeting the associated community rather than the building, and some may have been targeting security forces present in the building (for example, the attack on the mosque in Abha, Saudia Arabia on 6 August 2015), highlighting the indivisibility of the people and the places. Each event was individually assessed for inclusion.

Events which did not have a major news release (e.g. website updates) cannot be considered to have reached wider public consciousness, and were excluded from the Twitter analysis, as were events where no Arabic media release could be confirmed. In this last respect, a mistake was made, regarding the Shrine of al-Imam ’Ali al-Hadi. This site was excluded as no media release could be identified, but Doménovič Domén of Monuments of Mosul in Danger recently informed us of a news release regarding the site’s destruction. Palmyra museum destruction occurred during the study period, but the video release occurred after: it is excluded.

A large number of shrines were destroyed during the study period. It has not been possible to identify them all: however, many had no media release and so can be assumed to have had minimal impact on sentiment. It has not been possible to take account of any effect that the aggregated destruction of multiple unnamed shrines may have had; for example, articles such as *Yezidis rebuild 50 percent of shrines destroyed by ISIS* (The Baghdad Post, 2017) indicate that the true number of destroyed sites is much higher, but individual sites cannot be located or assessed.

Information was collected on 121 events: 85 were attributed to ISIS, including three rumours, leaving 82 actual events. Of the 85 events attributed to ISIS, 60 had at least one media release, including the rumoured events, which impacted sentiment. These formed the final study set. Of these, 3 were rumours; 15 had photos which could not be confirmed as the stated site; and 16 could not be confirmed at all. Only 31 events appear to have actually been claimed by ISIS, including 4 photos with an unclear origin which is thought to be ISIS.

---

1 Dr Sam Hardy has compiled numerous examples of media use of photos that are not of the site in question, so each event must be checked by experts - see the Conflict Antiquities Blog ([https://conflictautiquities.wordpress.com/](https://conflictautiquities.wordpress.com/))
** An unnamed Church in Al-Shaddadi, which was turned into a gym for ISIS members, was accidentally excluded from the sentiment analysis, as was Mart Maryam Armenian Orthodox Church. However, they are included in the event counts for completeness.
